Quality is to software as water is to life. This analogy is helpful in explaining the sheer importance of Quality in software development life cycle. At LAFZ, we never compromise on Quality and our test savvy services revolves around the mantra: "Quality comes first". Moreover, our testing services fit the exact definition of Quality which is defect free, on time , within budget and meet customer's requirements.

LAFZ offers two major types of testing services:

1)Manual Test Management
2)Automation Test Management

Manual Test Management:
===========================
No matter how many testing tools arrive in the market but none can replace a human eye. Our test mavens follow an agile based scrum approach and have a discerning eye which help them to test from different testing angles such as functionality, security, reliability, usability, availability and scalability.

Service Offering:
==============================
Our manual testing services are in the following areas:

Functional Testing
Non-Functional Testing
Mobile Testing
Cloud Testing

Automation Test Management:
===========================
Automation testing becomes figure and manual testing becomes ground when a tester has to repeatedly executes a large number of test cases in every software
release or sprint to ensure quality. Automation testing reduces the time to run tedious and time consuming regression tests from days to hours.

Lafz has vast experience in the realms of automation tools implementation, script and framework development.

Testing Tools Experience:
==============================
Jira
Bugzilla
Assembla
Testrail
Tarantula
Selenium

Sikuli
Splunk
Microsoft Visual Studio Team System
iMacros
Jmeter

Test Deliverables:
===========================
Following artifacts would be given to customers at the start, middle and end of software development life cycle:

Test Plan
Testing Strategy
Test Traceability Matrix
Test Case
Test Scripts
Test Data
Test Results
Test summary report
Release notes
